Finding Aid To

THE JOHN MACLEOD, MD (1905-1984) PAPERS

**Dates of Papers:
1937-1977**

**100 Linear Inches
(12 Boxes)**

**Finding Aid Prepared By:
Stephen Novak
Assistant Archivist
Undated**

Provenance

These papers were discovered by the Medical Archivist in the sub-subbasement of the Lying-In Hospital, Room M-00028. They were transferred to the Archives, August 8, 1984.

Biographical Note

John MacLeod was born on November 29, 1905 in Edinburgh, Scotland, the eldest of four children of a printer. Although the family was not poor, Dr. MacLeod left school at 14 to get a job and bring money into the household. After a short time as a messenger, he became a lab boy in the Department of Physiology at the University of Edinburgh. In three years, he was promoted to chief assistant to the Department's chairman, the renowned Sir Edward Sharpey-Schafer, with responsibility for preparing and participating in all of Sir Edward's research experiments.

Dr. MacLeod quickly realized "what a wonderful thing this science was" and began sitting in on all the lectures given by the Department. His eagerness to learn caught the attention of another faculty member, Eric Ponder, and when in 1927 Dr. Ponder left to become professor of biology at New York University he asked Dr. MacLeod to come along as his lab assistant with a scholarship from N.Y.U. for undergraduate study.

Dr. MacLeod received his B.A. in English from N.Y.U. in 1934 and immediately accepted a research fellowship at Cold Spring Harbor Biological Laboratory, where Dr. Ponder had recently been made director. He remained at Cold Spring Harbor until 1938 in the meantime acquiring his M.S. from N.Y.U.

In 1938-1939, Dr. MacLeod did work at Rockefeller Institute before being lured by Dean Joseph Hinsey to the Cornell University Medical College's male infertility clinic. Although his previous work had been with white blood cells, Dr. MacLeod quickly became an expert in the field of human male infertility and the behavior of the human spermatozoa.

In 1945, only four years after receiving his Ph.D. from Cornell, Dr. MacLeod won the prestigious Lasker Award for his research in the metabolism of human spermatozoa. In the 1940s and 1950s, with the financial backing of the horse breeder, Cornelius Vanderbilt Whitney, Dr. MacLeod established various aspects of semen quality in relation to male fertility that remain international standards to this day.

After retiring from the CUMC Department of Anatomy in 1972, Dr. MacLeod remained at the Medical Center, setting up a consultation laboratory for male infertility in the Department of Obstetrics and Gynecology. He retired again in 1977 at which time the Medical Center established the MacLeod Institute for

Biographical Note (cont)

Human Reproduction.

Dr. MacLeod married Catherine Brown, a secretary at Cold Spring Harbor in 1934 and was the father of two children. He died at New York Hospital on January 24, 1984.

Scope and Content

The bulk of these papers cover the years 1961-1972, the end of Dr. MacLeod's career when his best-known work was done. As an expert in his field, his correspondence includes inquiries from physicians and scientists from around the world, usually asking his advice on particularly difficult research or clinical problems in male infertility.

There is also considerable material relating to Dr. MacLeod's research activity including correspondence with pharmaceutical companies, foundations and the National Institutes of Health. His ties with such public health groups as the Health Research Council and Planned Parenthood can also be investigated in this collection.

The rest of the collection consists of notebooks from the 1930s-1940s (3v), reprints and sixty-five inches of "Infertile Marriage Histories." These seem to be records created as part of Dr. MacLeod's consultation work at the Medical Center. They date from c. 1959 to c. 1964 and contain the husband's vital statistics and medical history, marital information and detailed information regarding the husband's spermatozoa.

Restrictions

Boxes 1, 8-12 are restricted because of the patients' records they contain. They can be examined only with the permission of the Medical Archivist. [Patient records are protected under HIPAA's privacy rule.]

Non-Manuscript Material

Two boxes (c. 10") of films and slides can be found in the storage room. The slides seemed to have been used by Dr. MacLeod during his lectures. The films, which are 16 mm, dates from 1942. The notes on the film boxes are obscure but seem to indicate that these are films on horse sperm and cell and germ behavior. There are 42 reels.
